Sustainable solutions for
modern (agricultural) construction

bouwimpex

Bouwplast PVC windows

The 10 Bouwplast securities

- Flexible system: can be used in any desired size and version
- Low maintenance: easy to clean and fully UV-resistant
- Sustainable: lasts for generations
- Thermal insulation: comfortable and energy-saving
- Sound insulation: for a pleasant indoor climate
- Recyclable: re-use saves raw materials and energy
- Environmentally friendly: manufactured from lead-free PVC
- Quality: tested quality product with long life span
- Economic: the PVC window with the best price/quality ratio
- Delivery: fast delivery to the building site

Bouwimpex offers a complete product range of PVC windows that have been specially developed for modern (residential) construction. Bouwplast windows are produced from high-quality PVC and have a strong and stable construction. These solid windows are available in numerous types and versions and can also be ordered in project sizes. With an excellent price-quality ratio, Bouwplast windows are the most logical choice for your next (residential) construction project!

Why Bouwplast PVC windows?

- Strong, stable plastic construction
- Lightweight
- Available in numerous types and versions
- Equipped with insulating double glazing
- Including EPDM leakproof seal
- Complete product range of finishing profiles
- Available in various colours
- High quality and long lifespan
- Entirely maintenance-free (UV-resistant)
- Easy installation & service
- Optimal light output

High (residential) construction quality for a hard-wearing result

Bouwplast windows meet the strict requirements that are set in (residential) construction. For this reason, they are increasingly used for (international) construction projects. And our list of satisfied customers is growing.

PVC is a modern, environmentally friendly raw material that offers both economic and ecological benefits. Bouwplast windows are always produced from entirely lead-free hard PVC and contain environmentally friendly calcium-zinc stabilisers. Furthermore, PVC has a very long life span due to its good resistance to all common weather conditions. Moreover, the PVC windows have good insulating and thermal properties.

Choosing Bouwplast windows also means choosing the best price-quality ratio.

Would you like to order a PVC window in project size or do you have special requests? No problem. Bouwimpex will produce according to your wishes, in any size and version. We will be happy to advise you!

Bouwplast PVC windows: in numerous types & versions

The Bouwplast PVC windows product range is available in a large variety of types, versions, glass types and sizes. We supply hopper windows (with flange), fixed glass windows or tilt & turn windows in various versions. We also offer special gable windows, sliding doors or interconnected milking carousels that can easily be executed with Bouwplast PVC windows.

An additional advantage is that different versions and types can be combined. Most windows are supplied from our stock and can, therefore, often be installed directly.

Your window on project size

PVC windows are increasingly being supplied made to measure for construction projects. With the Bouwplast project product range, you can have virtually any desired project size and design produced. The advantage of this is that you can have the windows installed directly and quickly. We will be happy to advise and inform you about the possibilities for customization.

Choosing for customization means:

- Manufactured directly to project size
- Quick and easy installation
- Virtually endless possibilities
- Also available in project colour (Renolit foil with a smooth or wood grain texture)
- Very high (residential) quality
- Very attractively priced

Bouwplast PVC recessed windows are simple yet strong. Good, but also cost-effective. That's why Bouwplast windows are mainly used in projects where a functional and solid PVC window is required, such as agricultural (commercial) buildings, warehouses and industrial halls.

Applications:

- Skylights in agricultural buildings
- Complete sliding doors with fixed glass
- Offices and buildings with combined fixed glass, tilt & turn window frames and/or doors
- (Trapezium) top facade frames
- Circular linked frames in milking carousels (cattle)

Bouwplast Hopper windows

Applications:

- Barn construction
- Shed construction
- Hall construction
- Industrial buildings
- Boiler and storage rooms

Our Bouwplast hopper windows are frequently used in the construction of sheds and barns. These solid and functional windows have an excellent price/quality ratio. In addition to the standard colour white, Bouwplast hopper windows are also available in dark brown. These windows are supplied with insulating double glass as standard.

In addition to the standard sizes almost any desired project size can be produced at a small extra cost. We will be happy to advise and inform you about the possibilities of customization.

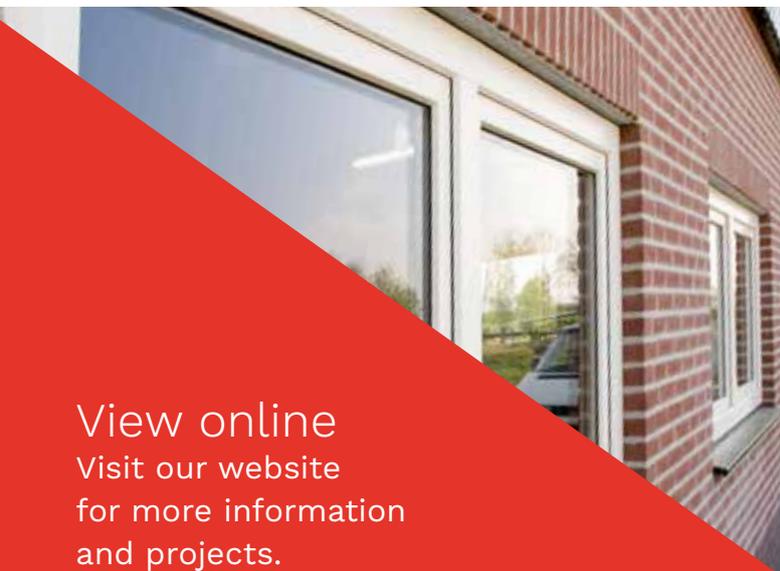

Advantages and features:

- Executed with flat profile
- Stable, strong construction
- Good 'anti-leak' sealing
- Optimal light output
- Easy and quick to install
- Standard frame colour, white
- Large number of standard sizes from stock
- Special project sizes possible at a small surcharge
- Standard with 3 flexible ventilation settings
- Easy to remove/replace window
- Most used barn window in Europe

Technical details

Material	hard PVC (UV-resistant)
Dimensions	standard sizes in accordance with price list (different dimensions possible)
Profile	flat, 58 mm
Colours	standard white (brown on request)
Glazing	14 mm Isoglass (4-6-4 mm) or 24 mm HR++ glass

Bouwplast
Hopper windows

Bouwplast Tilt & turn windows

Applications:

- Residential construction
- Hall construction
- Agricultural buildings
- Industrial buildings
- Hobby and play areas

Bouwplast tilt & turn windows are a solution for those places where more comfort is required. This quality product has burglar-resistant security hardware and is entirely maintenance-free. The high-quality insulating glazing guarantees a high insulation value, low energy costs and maximum noise reduction. The PVC window is quick and easy to install.

Various mounting depths, one quality:

Bouwplast tilt & turn windows can be supplied with a mounting depth of 58 mm or 70 mm. This means there is the right frame for every application. Naturally, both types are supplied with high Bouwplast quality.

Advantages and features:

- Profile of residential construction quality
- Insulating (heat reflecting) double glazing
- Fitted with high-quality security hardware
- 70 mm profile width
- Double-sided rubber leakage profiles as standard
- Produced directly to the desired project size
- Quick installation without delay
- Entirely maintenance-free (UV-resistant)
- Also available in project colour (Renolit foil with a smooth or wood grain texture)
- Very attractively priced

Technical details

Material	hard PVC (UV-resistant)
Dimensions	standard sizes in accordance with price list (different dimensions possible)
Profile	58 or 70 mm profile depth (5-chamber structure)
Colours	standard: white; other (RAL) colours with Renolit foil on request
Glazing	24 mm insulating, heat reflecting double glass (4-16-4 mm); Optional HR++ glass

Bouwplast Easy windows

Applications:

- Barn construction
- Agricultural buildings
- Hall construction
- Industrial buildings

Choosing PVC windows in Easy version means choosing fast, simple installation. The standard flange (rebate profile of 21 mm) makes it possible to place the windows from the outside directly into the opening. Because Bouwplast Easy windows are fitted with an EPDM leakage sealing along the flange, a good connection is ensured, and their finish is immediately beautiful. Easy windows are available in all versions (with fixed glass, in tilt & turn version or just as an easy skylight).

Advantages and features:

- Equipped with flange, 21 mm on each side
- Quick and easy installation
- Rebate profile ensures an attractive finish
- Entirely maintenance-free (UV-resistant)
- Optimal light output
- Complete with insulating double glazing
- Available as traditional hopper window, fixed glass window or in more luxurious tilt & turn version
- Hopper window in standard sizes available from stock
- Robust appearance

A standard colour range is available, especially for applications with tilt & turn windows (Renolit foil with a smooth or wood grain texture). With Bouwplast windows you will find the right colour for your project!

Technical details

Material	hard PVC (UV-resistant)
Dimensions	standard sizes in accordance with price list (different dimensions possible)
Profile	70 mm overlap, flange 21 mm on each side (5-chamber structure)
Colours	standard: white (other RAL-colours with Renolit foil on request)
Glazing	14 mm Isoglass (4-6-4 mm); Optional HR++ glass

Bouwplast
Easy windows

Bouwplast Window frame finish

Applications:

- Agricultural buildings
- Hall construction
- Shed construction
- Industrial buildings

After installing a Bouwplast window, you prefer to finish the frame in the recess quickly, easily and sleekly. Bouwimpex offers a ready-made window frame solution for every construction specialist. This window frame finish is mounted in the recess on the construction site and is installed in no time at all. Just like our Bouwplast windows, the window finish can be supplied in various sizes.

Sleek appearance and beautiful match:

In addition to the practical benefits, this product also looks great. With its sleek appearance, the window frame finish can be perfectly combined with multiple types of Bouwplast PVC windows. For example, it creates a very pleasant match with the Bouwplast Easy frame.

Advantages and features:

- Ready-made frame of high-quality PVC
- Quick and easy installation
- Sleek appearance
- Entirely maintenance-free (UV-resistant)
- Can be produced in various sizes
- Can be combined with various types of Bouwplast windows
- Easy to clean

Bouwplast
PVC doors

Bouwplast PVC exterior doors are characterised by their simplicity and leave nothing to be desired in terms of quality. These doors can be exposed to exceptional loads, are protected against all weather conditions and offer a high degree of security.

Bouwplast doors are produced from hard-plastic PVC and are fitted with a steel reinforcement core as standard, solid 3-points-closure and draught-free multi-chamber profiles.

Available with insulating, burglar-resistant double glass or entirely sealed with a tight insulating plastic sandwich filling.

This high-quality residential construction quality door is guaranteed a long lifespan!

Bouwplast exterior doors are supplied in clear white as standard; however, delivery in a desired project colour is naturally possible.

Technical details

Material	hard PVC (UV-resistant)
Dimensions	standard sizes in accordance with price list (different dimensions on request)
Profile	70 mm profile depth
Colours	standard: white. Other (RAL) colours on request (Renolit film with a smooth or wood grain texture)
Glazing	24 mm insulating, heat reflecting double glazing. Optional HR++ glass

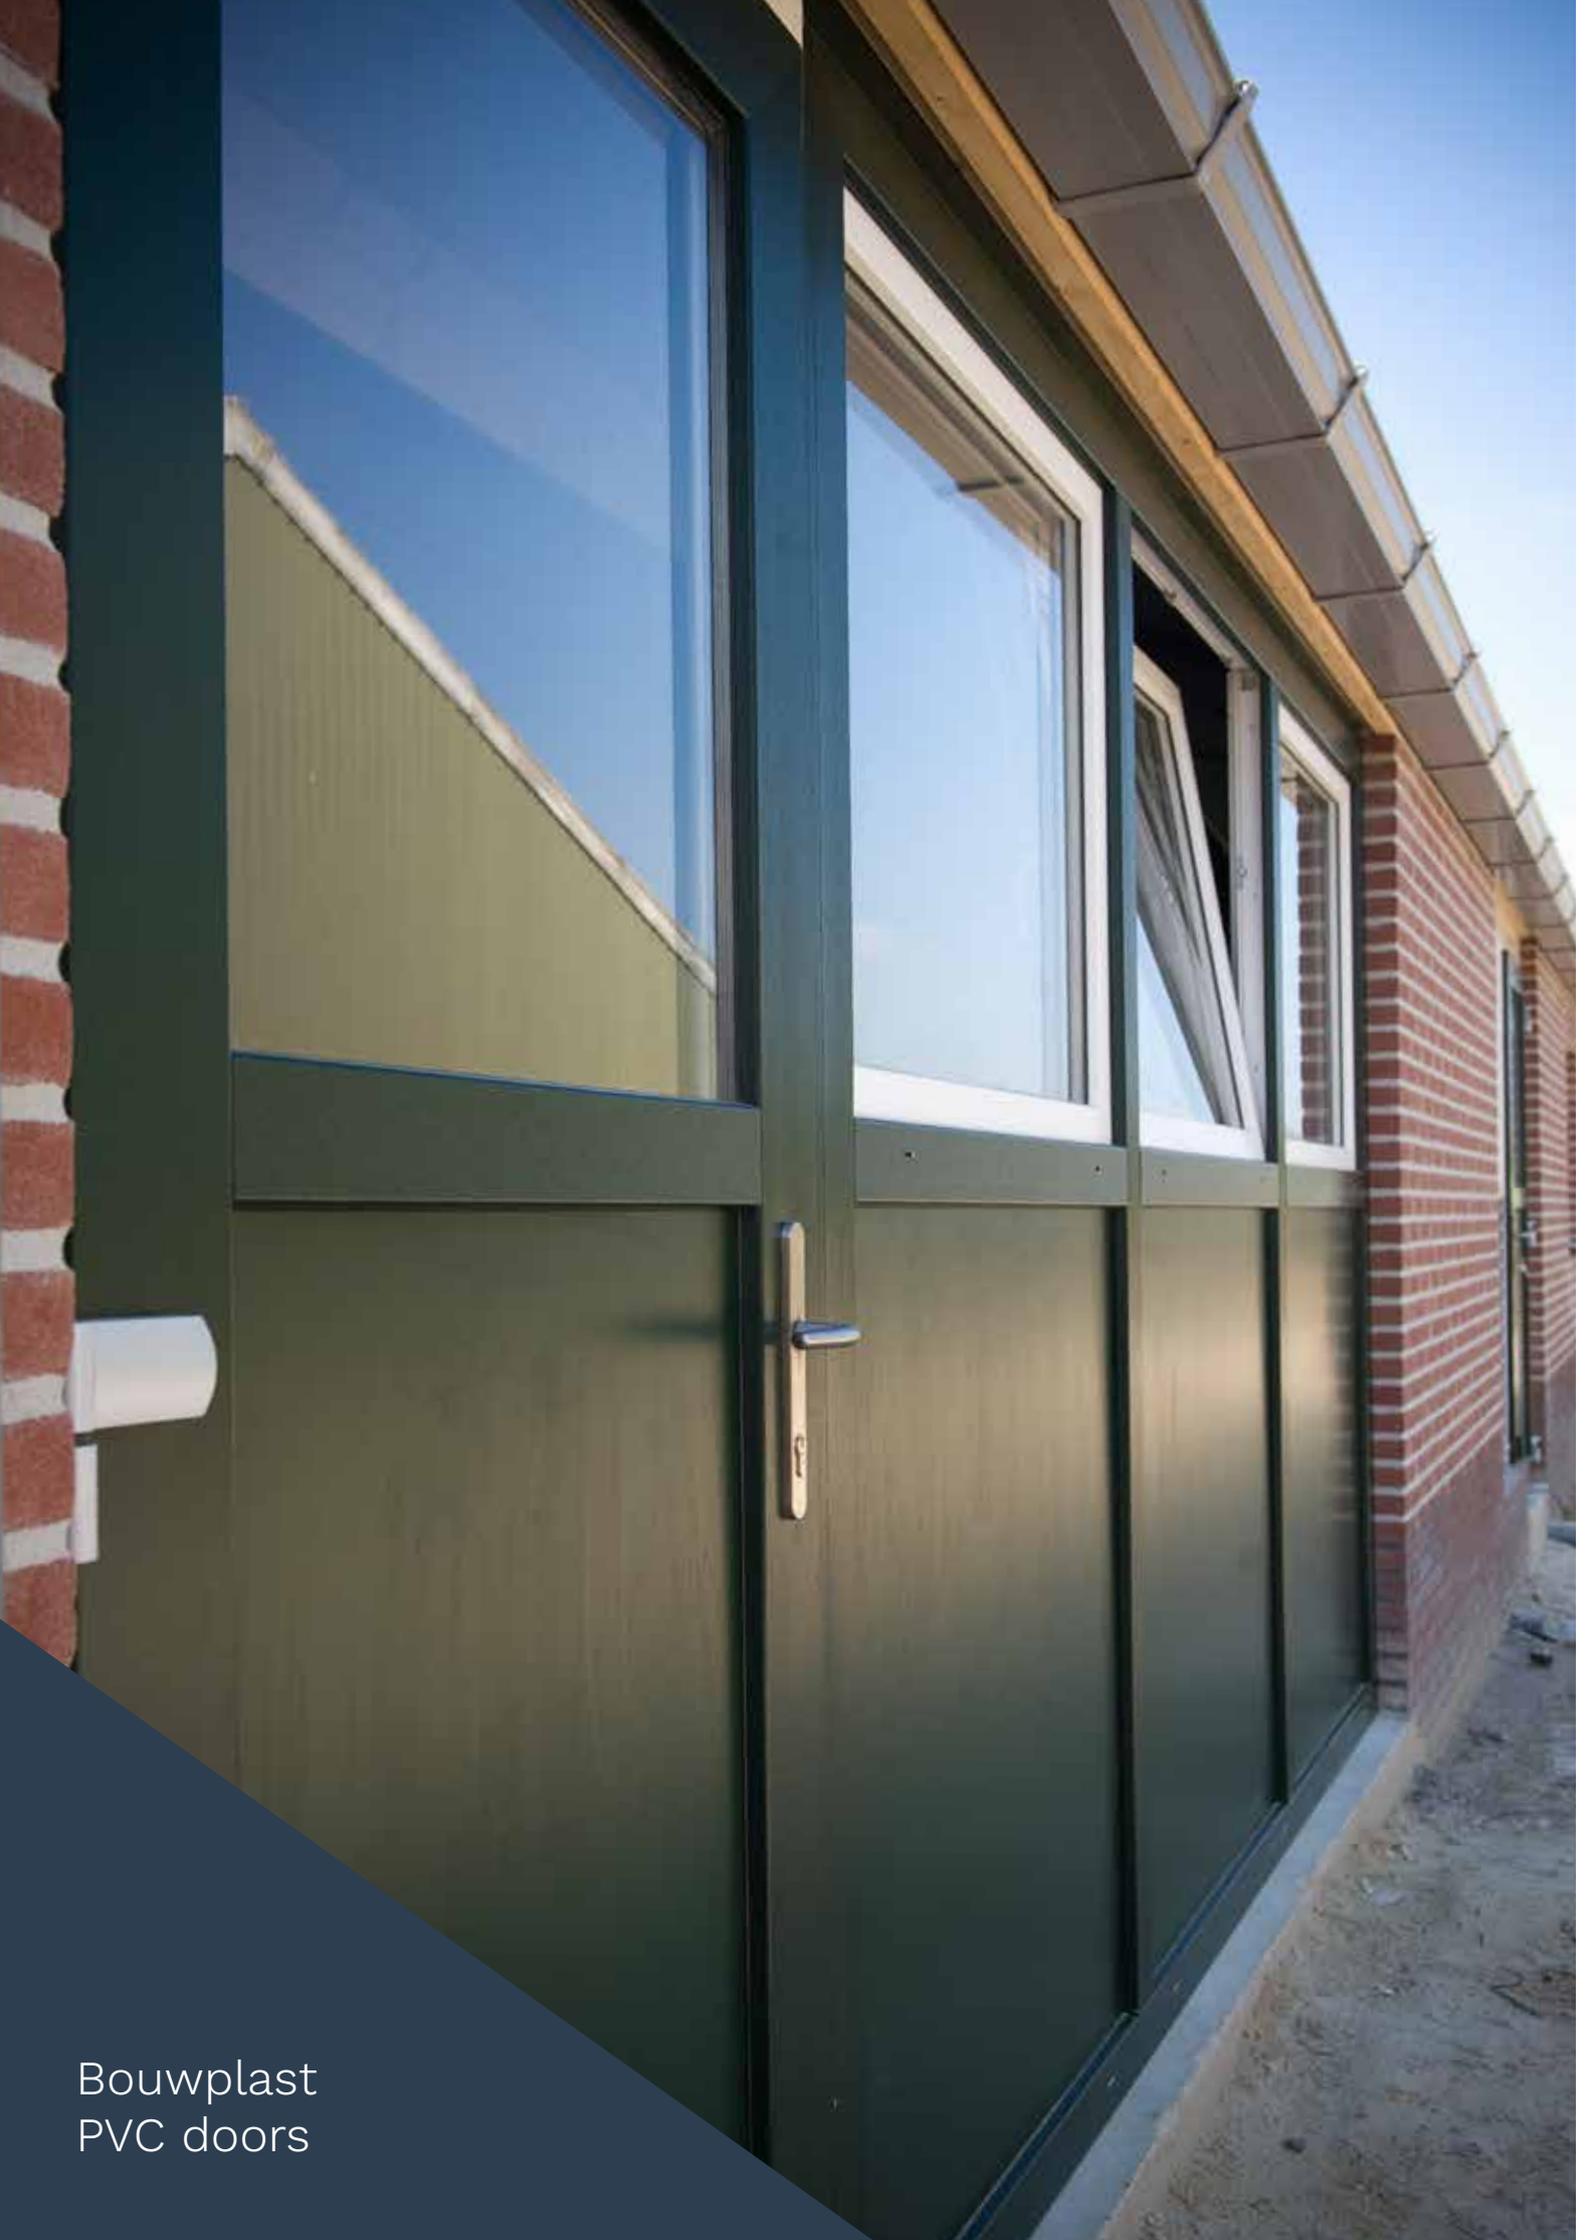

Advantages and features:

- Sustainable residential construction quality
- Steel reinforcement core
- Insulating heat reflecting double glass (24 mm)
- Fitted with high-quality security hardware
- In 70 mm profile depth
- Standard with double-sided rubber leakage profiles
- Can be produced directly to any desired project size
- Quick and easy to install
- Entirely maintenance-free (UV-resistant)
- Available in numerous colours (Renolit foil with smooth or wood grain texture)

Applications:

- Residential construction
- Shed/hall construction
- Agricultural buildings
- Attachments and outbuildings
- Heavy industry

Colour your
project

Within the agricultural sector and commercial construction, high quality, reliability and functionality of the material are paramount. For the best price-quality ratio, our PVC windows are typically ordered in the standard colour - white. However, there may be reasons why you wish to deviate from this standard colour. Coloured windows and doors emphasise the design and appearance of a building.

Bouwimpex offers the option to execute your project in a desired colour(s). Renolitfilm is used for this purpose and is available in a large number of RAL colours (in smooth or wood grain texture). This high-quality film has a high colour fastness, is insensitive to warping under the influence of sun, moisture or heat and is both rot and maintenance-free.

Ask your sales advisor about the options.
